Summary

Full stack JavaScript engineer with 7+ years building and shipping web products end to end: UI, Python and Node.js APIs, and AWS infrastructure. Deep in React, Vue, and TypeScript, with 4+ years in US healthcare (claims, EDI, contact center) including work for UnitedHealth Group. Remote-first since 2021. Known for building internal tooling that the rest of the team actually uses.

Skills

Languages: JavaScript, TypeScript, Python (intermediate), SQL

Frontend: React, Next.js, Vue.js, TanStack Query, Tailwind CSS, Material UI, Webpack, Vite

Backend: Node.js, Express, REST APIs, GraphQL, WebSocket

Databases: MySQL, MongoDB, DynamoDB, Firebase

Testing: Vitest, Jest

Cloud & Tooling: AWS (Lambda, S3, CloudFront), Terraform, CI/CD (GitHub Actions), Splunk, Git, Bash, SonarQube

Experience

Full Stack Engineer

Jul 2023 – Present

Miratech Group (client: UnitedHealth Group)

Remote, India

- Built a real-time configuration datastore for Amazon Connect: a React + MUI app with Monaco Editor and theme-based UI where users add, edit, and publish agent and line-of-business configs in real time.
- Wrote its Python backend: CRUD APIs on AWS Lambda over DynamoDB, with LSI and GSI indexes powering search and sorting.
- Cut config publish time from about 2 minutes per change (GitHub pipeline deploy to the DB) to milliseconds, with updates reflecting to agents instantly.
- Owned the feature end to end, from requirement gathering through GitHub Actions CI/CD workflows, Terraform setup for new instances, and failover testing across east and west AWS regions.
- Unified frontend and backend Splunk queries into a single user-journey log, so one query traces a request across the full stack when debugging production issues.
- Customize and ship Genesys contact center features for UnitedHealth Group, from stakeholder requirements through demo and release.
- Mentor a team of 5-6 engineers: onboarding new hires, PR reviews, holding the line on coding standards and Vitest test coverage, and patching security vulnerabilities as they surface.
- *Tech: React, TypeScript, MUI, Python, AWS Lambda, DynamoDB, Terraform, Amazon Connect, Genesys, GitHub Actions, Splunk, Vitest*

Frontend Engineer

Jul 2021 – Jul 2023

Heals Healthcare

Remote, India

- Built an all-in-one claim settlement portal in Vue.js serving 52,000+ users and processing 5-6K claims a month across payor and provider workflows, consuming GraphQL APIs through TanStack Query.
- Migrated the patient-facing app from Angular to React with full UI parity, cutting build times and hot-reload waits enough to visibly speed up the team's release cycle.
- Automated patient chit collection for EDI generation, replacing a fully manual step and improving the claim settlement ratio.
- *Tech: Vue.js, React, Next.js, GraphQL, TanStack Query, Tailwind CSS, HighCharts, Jest, Webpack*

Associate Developer

Dec 2018 – Jul 2021

Rishabh Software

Vadodara, India

- Built REST APIs in Node.js + TypeScript and an Angular UI for the company-wide internal chat platform serving 500-1K daily active users, including a Firebase function tracking unread counts for the Android app.
- Created a vehicle booking service using the Google Distance Matrix API to assign the nearest available vehicle; deployed the Node.js backend on AWS Elastic Beanstalk with the frontend on CloudFront.
- Shipped React components for The Laundry House product, including thermal label printing via raw ZPL commands.
- *Tech: React, Angular, Node.js, TypeScript, WebSocket, Firebase, AWS, Material UI, SonarQube*

Education

B.E. Computer Science , Birla Vishvakarma Mahavidyalaya (BVM)	2015 – 2018
Diploma in Computer Science , Parul University	2012 – 2015

Awards

- **Smart India Hackathon** (Government of India): national finalist Mar 2018
- **HackInfinity**, DA-IICT: top 10 hacks Dec 2017
